

## HUNT PIPE POSITIONING BOARD

### A SEAMLESS FINISH ON A STRONG INSULATED BASE

Hunt Pipe Positioning Board is a polystyrene based insulation and hydronic pipe template in one easy to install product.

Because each panel interlocks with its neighbour, Hunt Pipe Positioning Board gives you a seamless finish and a strong base with which to start your project. Your pipe simply pushes into place between the specially designed grip lugs, holding it firmly in place.

Hunt Pipe Positioning Board once installed is not visible, does not use up valuable wall space, and is particularly effective in public areas, as there are no exposed or sharp surfaces, which as well as being unattractive can also be dangerous.

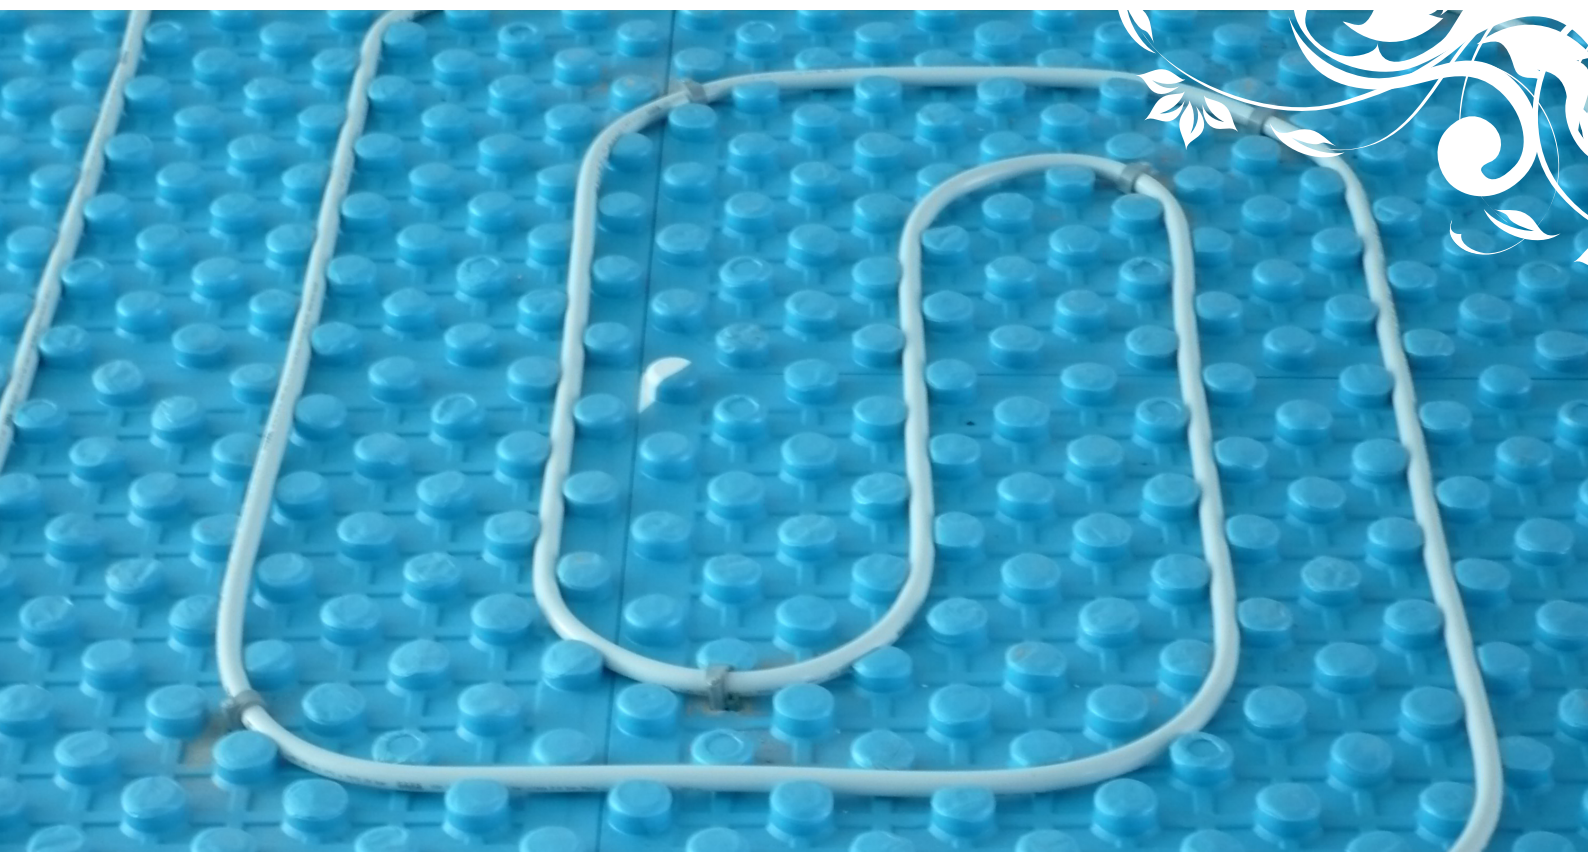

#### finishes

Blue HIPS film over flame retardant expanded polystyrene

#### measurements

1200mm x 800mm x 55mm

# HUNT PIPE POSITIONING BOARD

Panel size	1200mm x 800mm x 55mm
Concrete Screed	*20-50mm cover on top of Pipe
Material Grade	Flame Retardant Expanded Polystyrene
Density	30 kg/m <sup>3</sup>
Compressive Stress	160kPa @ 10% deformation
Cross Breaking Strength	260 kPa minimum
Max. Contact Temperature	70°C°
Hydronic Pipe Supported	16mm, 18mm and 20mm O.D.
Panel Jointing	16mm, 18mm and 20mm O.D.
Cutting Tools	Hand Knife, Handsaw or Hot Knife
Thermal Resistance	R Value = 1.00

\*Depending on floor covering over screed

Hunt Pipe Positioning Boards are made from expanded polystyrene combined with a HIPS (high impact polystyrene) film, which is added in the final stages of the moulding process.

Along with fantastic insulating properties, Hunt Pipe Positioning Board is a light yet durable product which holds hydronic piping in place over existing base flooring.

A concrete screed is then laid over the board and pipe. Climate control is achieved by circulating heated or cooled water through the piping, which then helps achieve a consistently comfortable environment.
